## DESCRIPTION

PRP's Quick Release Steering Wheel Hub is built for off-road and the abuse that comes with it. Each is made from solid billet aluminum, and then anodized black for durability. This hub allows you to quickly disconnect the steering wheel. This is helpful in vehicles with tight space where its hard to get in and out with the steering wheel in the way, or just for some extra anti-theft protection! Each Hub has machined with finely tuned splines tolerances, so you will have minimal movement in the wheel. We made the release handle extra wide on the hub, so it's easy to grip and disconnect even when you have race gloves on. Designed with a 6-point bolt pattern to work with our PRP Steering Wheels (and the majority of other aftermarket steering wheels).

The quick release hub comes with a center spline that fits on Yamaha steering columns. (Note: A steering wheel puller may be necessary to remove the OEM wheel).

Vehicle Fitment
Yamaha YZX, Yamaha Viking, Yamaha Wolverine, Yamaha Rhino
